

PET-Recycling:

Big benefits with little effort

Look after the environment

PET is a 100 per cent recyclable material. Recycling PET saves energy and oil because old bottles are used to make new ones.

Save money

Handing in PET drinks bottles for recycling is free. This means you can save some money as you help to save the environment.

A convenient system

All outlets selling PET drinks bottles take empty bottles back. It's convenient to return your bottles when you go shopping without having to make a special trip. There are also other public collection points such as council facilities, petrol stations and kiosks.

These go in the PET recycling containers:

Only *drinks bottles* made from PET with the PET recycling logo!

Tip: Air out, lid on!

Flattening PET drinks bottles saves space and therefore energy and costs.

If you're not sure whether something belongs in the PET container, ask yourself these *three questions*:

Is it a bottle?

Is it made of PET?

Did it contain a drink?

If the answer to all of these questions is yes, the bottle should go in the PET container.

If not, please dispose of the packaging in the rubbish or in the separate collection of plastic bottles.
